

Reporte Ejecutivo: Gestión de Riesgos

Alumno: Fabricio Hugo Funes (DNI: 45447810)

Materia: Seguridad - Gestión de Riesgos

Herramienta: SimpleRisk

Introducción:

El Trabajo Practico de Gestion de Riesgo nos ayuda a evaluar los riesgos iniciales para la clínica privada, considerando su infraestructura de 120 empleados y el manejo diario de aproximadamente 800 pacientes. Al analizar las vulnerabilidades, por lo que es fundamental identificar amenazas externas orientadas a la suplantación de identidad y la ingeniería social para vulnerar el perímetro de seguridad de la organización

Riesgos Principales (Top 5)

Se identificaron los siguientes riesgos prioritarios en la plataforma SimpleRisk:

1. R01: Ransomware en base de datos clínica (Nivel: Alto - 10).
2. R02: Robo de credenciales médicas - Phishing (Nivel: Alto - 8).
3. R03: Caída del enlace de internet principal (Nivel: Medio – 6.4).
4. R04: Acceso no autorizado a red Wi-Fi interna (Nivel: Medio - 6).
5. R06: Filtración accidental de datos por correo (Nivel: Bajo - 3.6).

Estado de los Planes de Acción:

Se encuentran formalmente creados y en estado inicial (New / Open) los planes de mitigación asociados a los riesgos críticos (R01, R02 y R03), asignando responsables, plazos y presupuesto estimado para su cumplimiento.

Planes de Tratamiento y Recomendaciones

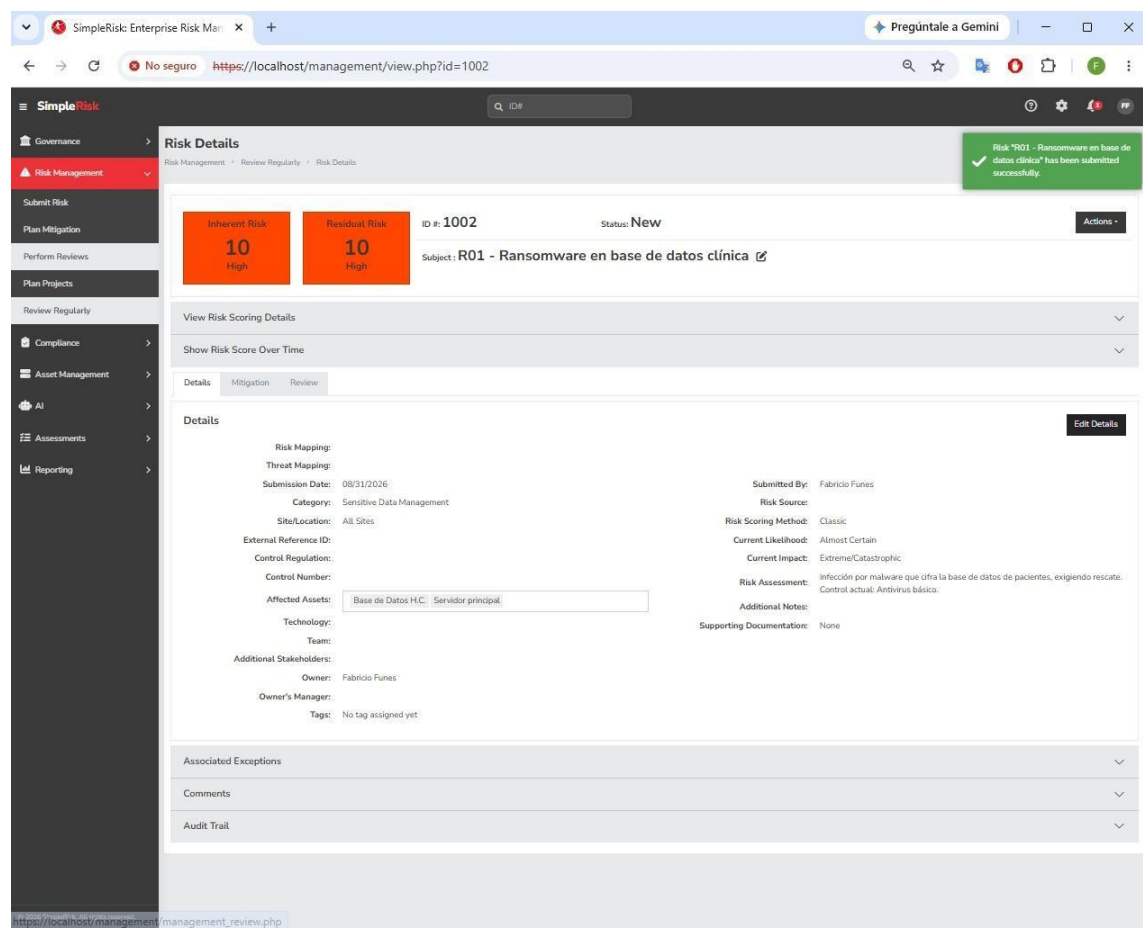

El plan de tratamiento propuesto establece un enfoque de defensa en profundidad: es fundamental implementar controles técnicos sólidos y redundantes para que una vulnerabilidad individual no comprometa la totalidad del sistema.

_ Recomendación prioritaria: Implementar un programa formal de concientización y capacitación continua en seguridad de la información para todo el personal clínico y administrativo, reforzando la detección temprana de

correos de phishing y el manejo adecuado de credenciales de acceso a las historias clínicas.

Anexos: Evidencias de SimpleRisk

R01 - Ransomware en base de datos clínica:

R02 - Robo de credenciales médicas (Phishing):
